- ② Mix a sufficient amount of 3000 psi concrete (supplied by others) to completely fill hole. Fill hole to just below ground level making sure the concrete settles and fills all voids.
- ③ Submerge the sleeve with the open end facing upward in the wet concrete. The sleeve should be installed plumb and level with the stop pin exactly 24" below the playing surface. Sleeve should never extend above the playing surface. Be sure to not allow concrete to get inside sleeve or you may be unable to install the standard.
- ④ Allow concrete to properly cure per package instructions prior to installation of the standard.
